

Trellised Rolling Planters

Rolling Planters Trellises, Mobile Green Walls

Rolling planters and trellises are a perfect combination. Trellises can be mounted on both the craftsman and the prairie style planters and all planters except cafe models. Both style planters provide a solid base for the trellises to be applied. When assembled, a trellis provides a rigid/strong vertical and horizontal pathway for climbing plants or plants that can naturally attach themselves to trellises. Further, the rolling planter trellises are designed to support branches of trees, shrubs, bushes and other woody vines via espalier training. Great for growing climbing vegetables/flower, ivies/vines, trees and bushes.

The trellises are shipped in a knockdown form requiring some assembly. Each lattice piece is pre-drilled for heavy wood screw fastening and has a nice smooth sanded finish.

Trellises can be ordered with our optional oil and stain finishes. 8 foot planters must have the trellis mounted on the planter's back face and requires three upright supports. Two trellis heights are offered: 6.5 and 7.5'. Shorter custom versions can be offered.
